## U.S. National Phase of PCT/GB2004/001056

## AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

- 1. (original) A method of sequencing a plurality of candidate vehicles, wherein each candidate vehicle in said plurality of candidate vehicles is a candidate to be allocated the next place in a sequence, said method comprising the steps of:
  - (i) receiving information pertaining to one of said candidate vehicles;
- (ii) calculating a value to be attributed to said candidate vehicle on the basis of said received information and information received from the candidate vehicle most recently allocated a place in said sequence;
  - (iii) repeating steps (i) and (ii) for each of said candidate vehicles;
  - (iv) selecting one of said candidate vehicles based on said attributed values; and
  - (v) allocating said selected candidate vehicle the next place in said sequence.
  - 2. (original) A method as claimed in claim 1, wherein said vehicles are aircraft.
- 3. (original) A method as claimed in claim 2, wherein said sequence is the landing sequence.
- 4. (currently amended) A method as claimed in any of the preceding claims claim 1, wherein said received information is received from the candidate vehicle to which said received information pertains.
- 5. (currently amended) A method as claimed in any of the preceding claims claim 1, wherein said received information includes information relating to the size of the candidate vehicle to which said information pertains.
- 6. (currently amended) A method as claimed in any of the preceding claims claim 1, wherein said value is representative of the spacing that would have to be maintained between the candidate vehicle and the candidate vehicle most recently

allocated a place in said sequence if said candidate vehicle were allocated the next place in the sequence.

- 7. (currently amended) A method as claimed in any of the preceding claims claim 1, wherein said value is representative of the delay that would be experienced by said candidate vehicle if said candidate vehicle was allocated the next place in the sequence.
- 8. (original) A method of operating a sequencing apparatus to sequence a plurality of candidate vehicles, wherein each candidate vehicle in said plurality of candidate vehicles is a candidate to be allocated the next place in a sequence, said method comprising the steps of:
  - (i) receiving information pertaining to one of said candidate vehicles;
- (ii) calculating a value to be attributed to said candidate vehicle on the basis of said received information and information received from the candidate vehicle most recently allocated a place in said sequence;
  - (iii) repeating steps (i) and (ii) for each of said candidate vehicles;
  - (iv) selecting one of said candidate vehicles based on said attributed values; and
  - (v) allocating said selected candidate vehicle the next place in said sequence.
  - 9. (original) A method as claimed in claim 8 further comprising the step of:
- (vi) sending details of the next place in said sequence to said selected candidate vehicle.
- 10. (currently amended) A method as claimed in claim 8 or 9, wherein said vehicles are aircraft.
- 11. (original) A method as claimed in claim 10, wherein said sequence is the landing sequence.
- 12. (original) Sequencing apparatus arranged in operation to sequence a plurality of candidate vehicles, wherein each candidate vehicle in said plurality of

candidate vehicles is a candidate to be allocated the next place in a sequence, said data processing apparatus comprising:

receiving means for receiving information pertaining to one of said candidate vehicles:

calculating means for calculating a value to be attributed to said candidate vehicles on the basis of said received information and information received from the candidate vehicle most recently allocated a place in said sequence;

selecting means for selecting one of said candidate vehicles based on said attributed values; and

allocating means for allocating said selected candidate vehicle the next place in said sequence.

13. (original) Sequencing apparatus arranged in operation to sequence a plurality of candidate vehicles, wherein each candidate vehicle in said plurality of candidate vehicles is a candidate to be allocated the next place in a sequence, said data processing apparatus comprising:

a receiver arranged in operation to receive information pertaining to one of said candidate vehicles;

a calculator arranged in operation to calculate a value to be attributed to said candidate vehicles on the basis of said received information and information received from the candidate vehicle most recently allocated a place in said sequence;

a selector arranged in operation to select one of said candidate vehicles based on said attributed values; and

an allocator arranged in operation to allocate said selected candidate vehicle the next place in said sequence.

14. (original) Sequencing apparatus according to claim 13, wherein said vehicles are aircraft.1

- 15. (original) Sequencing apparatus according to claim 14, wherein said sequence is the landing sequence.
- 16. (currently amended) A digital data carrier carrying a program of instructions executable by processing apparatus to perform the method steps as set out in any one of claims 1 to 7 claim 1.
